

HEXAGONALES PEHD PANELS

PEHD hexagonal panels are mainly used to create accesses and platforms for pedestrians, cars, forklifts and trucks up to 26 tonnes.

They are mainly installed on lawns, grassed areas or on more or less compacted surfaces.

They allow the creation of temporary carparks, driveways, storage areas...

Technical specifications

- **Material:** UV treated PEHD
- **Colour:** Light grey
- **Surface:** Non-slip
- **Dimensions:** 0.32 m² / panel or 3.6 panels / m² - thickness 4 cm
- **Poids :** 4.8 kg the panel
- **Permissible load:** 6 tonnes / m² depending on the type of ground
- **Transport:** per 100 m² rack, 10 racks per articulated lorry or 1000 m²

Properties

- PEHD hexagonal panels are quickly and easily installed.
- Thanks to their hexagonal shape they fit together and allow geometric patterns to be created.
- PEHD hexagonal panels are not suitable for the protection of sensitive lawns such as football pitches.
- They also exist in aluminium
