

ARENA ALUMINIUM PANELS

ARENA aluminium panels are mainly used to create accesses and temporary platforms for heavy loads.

They are mainly installed on fragile surfaces such as lawns, stadiums, golf courses, racecourses or tartan athletic tracks, tennis courts, beaches...

They allow for the installation of concert stages and for the use of cranes, articulated trucks and forklifts

Technical specifications

- **Material:** Stretched aluminium (continuous casting)
- **Colour:** Aluminium
- **Surface:** Slightly contoured, non-slip
- **Dimensions:** 6.45 m² / panel – 2.15 m x 3.00 m x 48 mm
- **Weight:** 190 kg/panel
- **Permissible load:** 100 t/ m² depending on the type of ground
- **Transport:** 120 panels per articulated lorry, ie 774 m²
- **Accessories:** Access ramps

Properties

- ARENA panels are screwed together and for the greater safety of both pedestrians and vehicles, the screws are embedded in the panels.
- They are also linked to each other by integrated brackets.
- The panels are composed of 4 aluminium sections of 0.41 m x 3.00 m.
- The sections are profiled, non-slip and assembled with dowels.
